

Deterioration Quantification

- Detects the deterioration of various liquids used at manufacturing sites.
- Visualizes the quality of drainage water, etc. to promote environmental control.

- Multiple sensors monitor liquid quality (**multi-sensor method**).
- Can **continuously monitor** liquid quality on-site or at a remote location.
- **Performs detection without stopping** machines or manufacturing lines.
- **Enables improvements in machining precision and machine lifetime, and water quality environmental control.**

block diagram

* The block diagram above is accurate as of the time of prototype development.
